

The Islamia University of Bahawalpur
Department of Data Science

Program/Semester: BS Data Science
Subject: Object Oriented Programming using Python
Instructor: Dr. Akmal Khan

Maximum Marks: 100
Time: 60 minutes
Date: 2025-12-04T00:00:00.000Z

Paper Type: MCQS (circle the right choice. Cutting and overwriting is not allowed)

Name: SARIM HAYAT

Roll No: F24BDATS1E01002

Section 1: Main Topic

1. How do you define a constructor in a Python class? (25 marks)

- A. def _construct(self):

B. def __init__(self):

C. def construct(self):

D. def constructor(self):

Q1:A ☐ B ☐ C ☐ D ☐

2. What is the output of the following code?

```
python
class Example:
    def __init__(self, value):
        self.value = value
    def __str__(self):
        return f'Value is {self.value}'

obj = Example(5)
print(obj)
```

(25 marks)

- A. Value is 5

B. None

C. An error is raised.

D. <__main__.Example object at memory_location>

Q2:A ☐ B ☐ C ☐ D ☐

3. What is the primary purpose of using decorators in Python? (25 marks)

- A. To define class attributes.

B. To modify the functionality of a function or class method.

C. To decorate the syntax of functions.

D. To implement recursion in functions.

Q3:A ☐ B ☐ C ☐ D ☐

4. Which of the following statements is true regarding inheritance in Python? (25 marks)

- A. Python only supports single inheritance.

B. Python supports multiple inheritance.

C. Inheritance cannot be used to override methods.

D. All Python classes must inherit from object explicitly.

Q4:A ☐ B ☐ C ☐ D ☐
